Dell inspiron 17 5000 series i7 drivers

The Core i5 version of the Inspiron 15 7570 is great for most people, as long as you don't plan on heavy multimedia editing or other tasks that require extra processor (CPU) power. However, it seems to be near impossible to find a Core i5 version with a touch display in either 1080p or 4K, so you'll no doubt have to look at Core i7 options for these extra features. From \$882 at Dell Cheaper starting price. Enough performance for most tasks. Most of the same features available. No touch display options. 4K version only available with Core i7. The Core i7 version of the Inspiron 15 7570 not only offers better performance for heavy tasks, but it also provides a 4K or FHD touch display option that's far easier to find. Active pen support and a larger battery round out the specs on the 4K model. From \$882 at Dell Better performance. Available with 4K or FHD touch display. Touch displays have IR camera. Costs more. Might not be needed for everyday tasks. While you essentially get the same laptop when it comes to design, ports, keyboard, and touchpad, the Core i5 and Core i7 versions of the Inspiron 15 7570 do have a few key differences. Let's take a look at the difference in performance between the two CPUs as well as what to expect when buying either model. Dell Inspiron 15 7570 Core i5 vs. Core i7 tech specs and performance Intel Core i5-8250U Intel Core i7-8550U Cores Four Four Threads Eight Eight TDP 15 W 15 W Base frequency 1.60 GHz 1.80 GHz Max turbo frequency 3.40 GHz 4.00 GHz Cache 6 MB 8 MB Graphics Intel UHD Graphics 620 Intel UHD Graphics 620 The biggest differences between these two CPUs are the base frequency and maximum turbo frequency that can be hit, making the Core i7 version better for power users. It will handle multitasking much better, and it won't eat much more power in the process. Both quad-core CPUs have the same integrated Intel UHD Graphics 620, but the Inspiron 15 7570 comes with a dedicated NVIDIA MX130 graphics card (GPU) with 4GB of GDDR5 VRAM for far better performance. Dell offers 8GB of DDR4-2400 MHz RAM with Core i5 and Core i7 models, but you might be able to find a Core i7 model with 16 GB elsewhere if you need the extra RAM for something like multimedia editing. Features Pushing the CPUs to the side, either laptop is still going to offer most of the same key features. You still get a backlit keyboard and sizeable touchpad, plenty of ports — including three USB-A 3.1, HDMI, USB-C 3.1, and Ethernet — and you get the same silver chassis that weighs in at about 4.40 pounds (1.99 kg). You'll notice, however, that the Core i7 model is available from Dell with an FHD touch display, while the Core i5 model is stuck with non-touch. 4K touch models can also be found that likewise come with the Core i7 CPU, but are much rarer. If you'd like active pen support or an IR camera for quick logins with Windows Hello, you'll have to stick with a Core i7 model, as these features are only available with a touch display. Considering the price difference between Core i5 and Core i7 models is just more than \$100 from Dell, you might consider opting for the more powerful CPU just for the added benefit of Windows Hello and active pen support. The Core i5 model is great for most people With a Core i5 Inspiron 15 7570, you're getting a dedicated NVIDIA MX130 GPU, 8 GB of RAM, and a 15.6-inch FHD non-touch display. It comes with the same selection of ports, and it's built into the same chassis as the Core i7 options. If you don't need the extra performance, a touch display, or an IR camera, you can save money and still have a laptop that can get through a normal day's work. Enough performance for most people. Intel's 8th Gen Core i5-8250U offers four cores and impressive power, enough for most people to get through a normal day of work. You might not get a touch display, IR camera, or active pen support on the Core i5 models, but you can save a good chunk of money. The Core i7 model has a few notable perks While the Core i5 and Core i7 laptops are nearly the same, you will have a few extra options if you opt for the latter. It is available with up to a 4K touch display with active pen support and an IR camera, but the extra price might not be worth it if those features aren't necessary or you don't need the extra performance of the Core i7 CPU. Extra power and perks are best for performance users. If you plan on multimedia editing or heavy multitasking, the Core i7 model will deliver better performance. The fact that it opens up touch display options and an IR camera for Windows Hello is an added bonus. We may earn a commission for purchases using our links. Learn more. Many people are used to dual core processors these days, but quad core processors are far better suited to high-spec gaming and video editing. Even as laptops with six or more processors become more common, quad core models remain powerful enough for most. Here are five of the best-rated models.Acer Aspire E 15Looking for i7 quad core laptop deals? This one's great if you're on a budget, even if it doesn't look like it. The Acer Aspire E 15 has a sleek and durable professional black construction, resistant to the demands of everyday use. It also has integrated thermal efficiency to ensure it never gets too hot to use. Although it has a bright 15.6-inch FHD LED display, the reflective screen makes this laptop difficult to use outdoors. Nevertheless, its quad-core i7-8550U processing power with 8GB RAM as standard and a 256GB SSD make this model worth a look.Lenovo IdeaPad 330Talking of sleek designs, Lenovo's flagship 2018 IdeaPad 330 has an effortless look of style. The 15.6-inch display is ample for most uses, although the HD resolution is a little limited at 1366×768. That said, most people probably won't notice. And the other specs make this laptop a worthy contender. It has an Intel quad-core Celeron N4100 processor, 4GB RAM and a 500GB HDD, as well as USB 3.0, Bluetooth connectivity and a webcam.Dell Inspiron 15 5000Dell is known for its high-spec gaming laptops. This i5 quad core model has a choice of 8GB, 16GB or 32GB RAM and either HDD or SSD ranging up to one terabyte of storage space. The screen is LED-backlit and full HD with anti-glare technology. And, for first-rate gaming, it has an NVIDIA GTX 1050 4GB graphics card. What many users first notice, however, is the design. With its edgy geometry and backlit keyboard, it's clearly a laptop for gaming.MSI GL62M 7REX-1896USThis is one of the best quad core i7 laptops available, and it's another one built for gaming. Thin and lightweight with a backlit keyboard, it looks like it means business. Its 15.6-inch display has an impressive 1920×1080 resolution, and the NVIDIA GeForce GTX 1050Ti graphics card is capable for some of the most demanding games. It also has a Nahimic 2 surround sound system and a storage capacity of up to one terabyte.HP 15.6-inch HD Flagship Laptop PCWith its Intel Quad Core Pentium N3710 1.6GHz processor, here's another laptop that means business, though perhaps business of another type. It has a 15.6-inch HD touchscreen display with 10-finger multi-touch support. It has a standard 4GB memory card and a 500GB HDD. There's also an HD webcam, DTS Studio sound, a USB 3.0 slot, multi-format SD slot and a SuperMulti DVD burner. MORE FROM QUESTIONSANSWERED.NET You can Get and install Audio driver for Dell Inspiron 17 5000 i5501 to get your laptop work properly. Here you can also find other Dell and other brands Driver. Dell Inspiron 17 5000 Specification Dell Inspiron 13 15 17 5000 Specification DELL Inspiron 5000 Series have 13, 15, 17 inch 2-in-1 with convertible laptop. Which is powered up to 10th Generation Intel Core i7-10510U quad-core processor, we have also integrated Intel UHD Graphics video card with their best shared graphics memory. This DELL Inspiron 5000 5491 laptop have 8GB DDR4 2666MHz system RAM and Their fast 128GB M.2 PCIe NVMe SSD to safe your files and other documents. Here we have portable mobile computer laptop with different display systems with Full HD (1920 x 1080) IPS touch screen display. 802.11ac WiFi, Bluetooth, backlit keyboard. Two USB 3.2 Gen 1, USB 3.2 Gen. one Type-C (DP/PowerDelivery), one Headphone/Microphone Combo, one HDMI 1.4, one Power jack, Stereo Speaker with MaxxAudio Pro, Windows 10 Home 64Bit OS, and integrated 3-cell 42 WHr battery.
